

COMPENSATION PROJECT

CliMates

Unique combination of two climate projects – peatland restoration project in Germany and an internationally acknowledged peatland-forest project in Indonesia.

GENERAL PROJECT INFORMATION

Project Type	Peatland restoration, REDD
Location	Germany, Indonesia
Project Size	68 ha peatland 149,800 ha forestry
Emission Reduction	447,150,280 t CO ₂
Standard	Verified Carbon Standard, Climate, Community & Biodiversity Standards, Moor Futures

ABOUT THIS PROJECT

MoorFutures – Schleswig-Holstein, Germany

In the course of this project, an area of 68 hectares will be rewetted on a permanent basis. As a result, the restored polder will develop into a mosaic of areas with rushes, reeds and wetland shrubbery as well as shallow ponds. The combination of wet and semi-dry peatland, open water and shrubs will result in a significant increase in the number of species of conservation interest.

Katingan Mentaya Project, Indonesia

The Katingan Restoration and Conservation Project protects and restores hectares of peatland ecosystems, to offer local communities sustainable sources of income, and to tackle global climate change. The project covers one of the largest remaining intact peat swamp forests in Indonesia. It is implemented in partnership with local communities and it protects vital peatland habitats in Central Kalimantan for 5 critically endangered, 8 endangered and 31 vulnerable species.

Benno Fuchs
Manager Sales Climate Solutions

FORLIANCE offers companies successful solutions for climate protection. To achieve this, our team of international experts develops together with you individual climate protection strategies and projects – for 20 years now.

MOOR FUTURES

- Positive influence on the hydrological balance and water quality in whole project area
- Habitats for rare plant and tree species, including many breeding birds
- Positive influence on the local micro-climate
- Preservation of one of the most important carbon sinks in Europe

KATINGAN MENTAYA

- Over 500 people are employed directly, 100 % of whom are Indonesian and 80 % are local to the project area
- Supporting local business: rattan weaving, production of value added products (coconut sugar, bio-degradable fibre bags) and ecotourism
- Home to large populations of many world's most endangered species such as Bornean Orangutan, Proboscis Monkey and Bornean Gibbon
- Proper land management improving soil conditions and water quality

This project focuses on the following Sustainable Development Goals:
