

## CLIMATE PROTECTION PROJECT

## XiCO<sub>2</sub>e: Mexican Reforestation Project

Empowerment of local communities by restoring degraded areas through sustainable forest management

GENERAL PROJECT INFORMATION	Project Type	Afforestation/ Reforestation
	Location	Mexico
	Project Size	1,341 ha
	<b>Emission Reduction</b>	3,977 t CO <sub>2</sub> per year (estimated)
	<b>Project Partners</b>	Ala Bool Trust SA de CV
	Standard	Verified Carbon Standard Certification projections in progress
	Verified Carbon Standard	

## ABOUT THIS PROJECT

The XiCO<sub>2</sub>e: Mexican Reforestation Project located in south-eastern Mexico aims to strengthen rural communities by providing sustainable long-term employment and improved living conditions. Long-term intensive agricultural farming (i.e. sugarcane, rice, citrus, cocoa) and livestock production have negatively impacted soil health. Thus, the introduced reforestation activities will help to improve poor quality conditions in the abandoned area and increase the natural biodiversity of the region. In addition, the project has a positive effect on the ecological resilience of the soil, thereby reducing erosion and preventing excessive water runoff.

By replanting the degraded area with Gmelina Arborea trees the project ensures the preservation of the local ecosystem and the restoration of soil nutrient cycling. The project provides capacity building and financial support for local communities to advance forest protection and management, increasing productivity and boosting economic development in the entire region.

Julian Ekelhof Senior Director Climate Solutions FORLIANCE offers companies successful solutions for climate protection. To achieve this, our team of international experts develops together with you individual climate protection strategies and projects – for 20 years now.

OUR CONTRI

BUTIONS	Social benefits	<ul> <li>Empowering the community through active participation at all stages of project development</li> <li>Poverty alleviation by providing decent jobs for local communities while improving the quality of life of their employees</li> <li>Strengthening the managerial, planning and organizational capacity of residents through regular training</li> <li>Growing local economy linked to the sustainable production of timber and non-timber forest products</li> </ul>
	Ecological benefits	<ul> <li>Prevention of soil erosion and increase in vegetation structure</li> <li>Reducing vulnerability, enhancing resilience in previously degraded land</li> <li>Forest conservation creates natural corridors and ensures the connectivity of regional native ecosystems</li> <li>Preservation and valorization of forest natural habitats</li> <li>Creation of protection for streams and watercourses</li> </ul>
